

Syed Tahmed Ahmed

Digital Product Designer | AI/ML & Digital Innovation

Sylhet, Bangladesh | +880 1766 217704 | syedtahmedahmed@gmail.com

Portfolio: behance.net/syedahmed51 | LinkedIn: linkedin.com/in/syed-tahmed-3998bb218

PROFESSIONAL SUMMARY

Digital Product Designer and Computer Science student with 3+ years of experience in graphic design, UI/UX, and digital product development. Skilled in user-centred design, product strategy, research, and cross-functional collaboration, with a proven 65% increase in active users for a student learning platform within two months. Currently expanding expertise in AI, machine learning, and deep learning, with a Grade A (92.06%) in Python for Machine Learning. Hands-on project experience building, training, and evaluating neural networks in Python, PyTorch, scikit-learn, and Matplotlib, now progressing into advanced deep learning. Interested in digital innovation, responsible AI, and inclusive technology for sustainable development.

CORE SKILLS

AI, Machine Learning and Data: Deep learning, artificial neural networks, PyTorch, Python, supervised learning, classification and regression, model training and evaluation, hyperparameter tuning, data cleaning and preprocessing, feature scaling, NumPy, Pandas, scikit-learn, Matplotlib, data visualisation, Jupyter Notebook, Google Colab, Git.

Product Design and Research: End-to-end digital product design, product requirements definition, user research, user testing, usability testing, interaction design, wireframing and prototyping in Figma and Framer, design systems, journey mapping, user personas, information architecture, inclusive design, product scoping.

Collaboration and Delivery: Cross-functional collaboration, stakeholder engagement, client relations, project management, deliverable tracking, design handoff to developers, team leadership, documentation, desk research, knowledge products, capacity-building materials.

PROFESSIONAL EXPERIENCE

Product Designer

Digital Way Business Ltd., Sylhet, Bangladesh | Full time | January 2024 – January 2025

- Led a cross-functional design team to deliver digital product solutions, translating business requirements into user-centred interfaces across product direction, visual design and user experience.
- Established visual design directions for three startup clients, Saltani, Gliranflax and ShiperAir, from initial concept through to delivered interface.
- Partnered with stakeholders across project management, design, user research, product thinking, UI and UX to align product decisions with business objectives.

UI/UX Designer

Esolution Digital Agency | Full time | May 2023 – September 2023

- Improved the learning experience of a student platform across web and mobile application.
- Engaged clients directly to establish product needs and translated those requirements into delivered interface designs.
- Collaborated with the founder and development team to identify and resolve UX problems, contributing to a 65 percent increase in active users within two months.

UI Designer

Floppyinn Digital Agency | 2022 – 2023

- Designed user interfaces for digital products based on client and business requirements.
- Translated design concepts and requirements into user-centred interface solutions, contributing to visual consistency, usability and overall product experience.

Graphic Designer

British English Academy | January 2021 – July 2021

- Designed company logos, event posters and booklets for organisational and client requirements.
- Developed branding systems to maintain visual consistency across communication materials.

MACHINE LEARNING PROJECTS

Fashion-MNIST Image Classification Model | [Google Colab](#)

Python, PyTorch, Pandas, scikit-learn, Matplotlib

- Built an end-to-end classification pipeline covering data loading, missing-value checks, pixel normalisation, an 80/20 split, and a custom PyTorch Dataset class and DataLoader for batched training.
- Trained an artificial neural network over 10 epochs using CrossEntropyLoss and the Adam optimiser, then evaluated test loss and accuracy and compared performance across modified architectures.

Diabetes Risk Binary Classification Model | [Google Colab](#)

Python, PyTorch, NumPy, scikit-learn

- Developed a binary classifier on a 768-record, 8-feature clinical dataset, implementing preprocessing, StandardScaler feature scaling, tensor conversion and the training loop manually.
- Selected BCELoss and the Adam optimiser with documented justification based on task type, output activation and a 65:35 class imbalance.
- Diagnosed mild overfitting from a 79.5 percent training and 70.8 percent test accuracy gap, then retrained a wider architecture reaching 88.6 percent training and 72.7 percent test accuracy.

EDUCATION

Bachelor of Science in Computer Science and Engineering

Metropolitan University, Sylhet, Bangladesh | Final-year student | Expected graduation 2027

TRAINING AND CERTIFICATIONS

AI/ML Expert Programme, Batch 01 – Phitron | September 2025 – present

- Python for Machine Learning — Grade A (92.06 percent).
- Deep Learning and Machine Learning — in progress; Advanced Deep Learning — enrolled.

UI/UX Design Bootcamp – CareerFoundry (online); UI/UX Guided Program – Design Pilot.

ADDITIONAL INFORMATION

Languages: Bangla — native. English — fluent, professional working proficiency.

Availability: Available for a full-time, three-month home-based internship with a flexible start date.
